

# Pediatric Management of Shock Flowchart

---

## General Management for All Patients

- Get help
- Position the child
- Give high-flow oxygen
- Support airway and ventilation as needed
- Ensure vascular (IV/IO) access
- Begin IV/IO fluid bolus therapy for shock
- Monitor oxygen saturation, heart rate, peripheral pulses, capillary refill, skin color and temperature, blood pressure, urine output, level of consciousness, blood glucose
- Perform frequent reassessments

## Hypovolemic Shock

- 20 mL/kg NS/LR bolus (repeat as needed)
- Control external bleeding (if present)

## Distributive (eg, Septic) Shock

- 20 mL/kg NS/LR bolus (repeat as needed)
