

Update to HeartCode BLS and HeartCode ACLS Skills for VAMs

CPR & Emergency Cardiovascular Care

Update to HeartCode VAM skills for BLS and ACLS

Coming April 2nd: New HeartCode BLS Self-Guided Skills with a VAM and new HeartCode ACLS Self-Guided Skills with a VAM will be published by HealthStream.

When the courses are re-versioned on April 2nd, no administrator action is needed.

If a student:

1. Is in progress with the current manikin activity: S/he can complete the course and receive a valid provider course completion card for as long as the 2010 software remains on the computer.
2. Has not accessed the current manikin activity: Upon accessing, s/he will see the new course version.

The courses and guidelines remain the same, but users will see:

- An updated user interface
- Closed captioning for all skills modules
- A new compressions-only module for HeartCode ACLS

Training Centers should keep the 2010 Installers but also download the 2015 Installers

Do not remove the 2010 VAM software. This allows in-progress students to complete the current courses without losing progress. The 2010 and 2015 software can coexist on the same computer.

Any Training Center that has not downloaded the new Installers below should work with your IT department to do so. If you have not downloaded the new Installers prior to April 2nd, you will be prompted to download them when the new courses initially launch.
